

# Holo Glass Touch Projection

## ABOUT

The app makes people understand the interface of the HoloLens. It tells how to use the HoloLens and operate it. For instance, it tells several gestures to make it start and it also tells how to scan the room. It is useful for those who have or want to use a HoloLens. The project also contains a prototype of an app, which shows how it works. Additionally, there is also a digital compositing of the product showing the immersive environment.

## Role

UI/UX Designing: 2019 ( March - April )

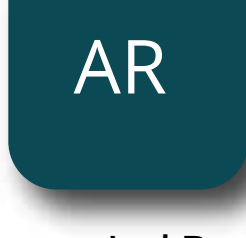

Prototyping: 2019 ( June - July )

Digital Compositing: 2019 ( August )

## Motivation Why HoloGlass?

Virtual Reality

Augmented Reality

Mixed Reality

Hyper Reality

## MOCKUPS
