

# HOME DESIGN AR

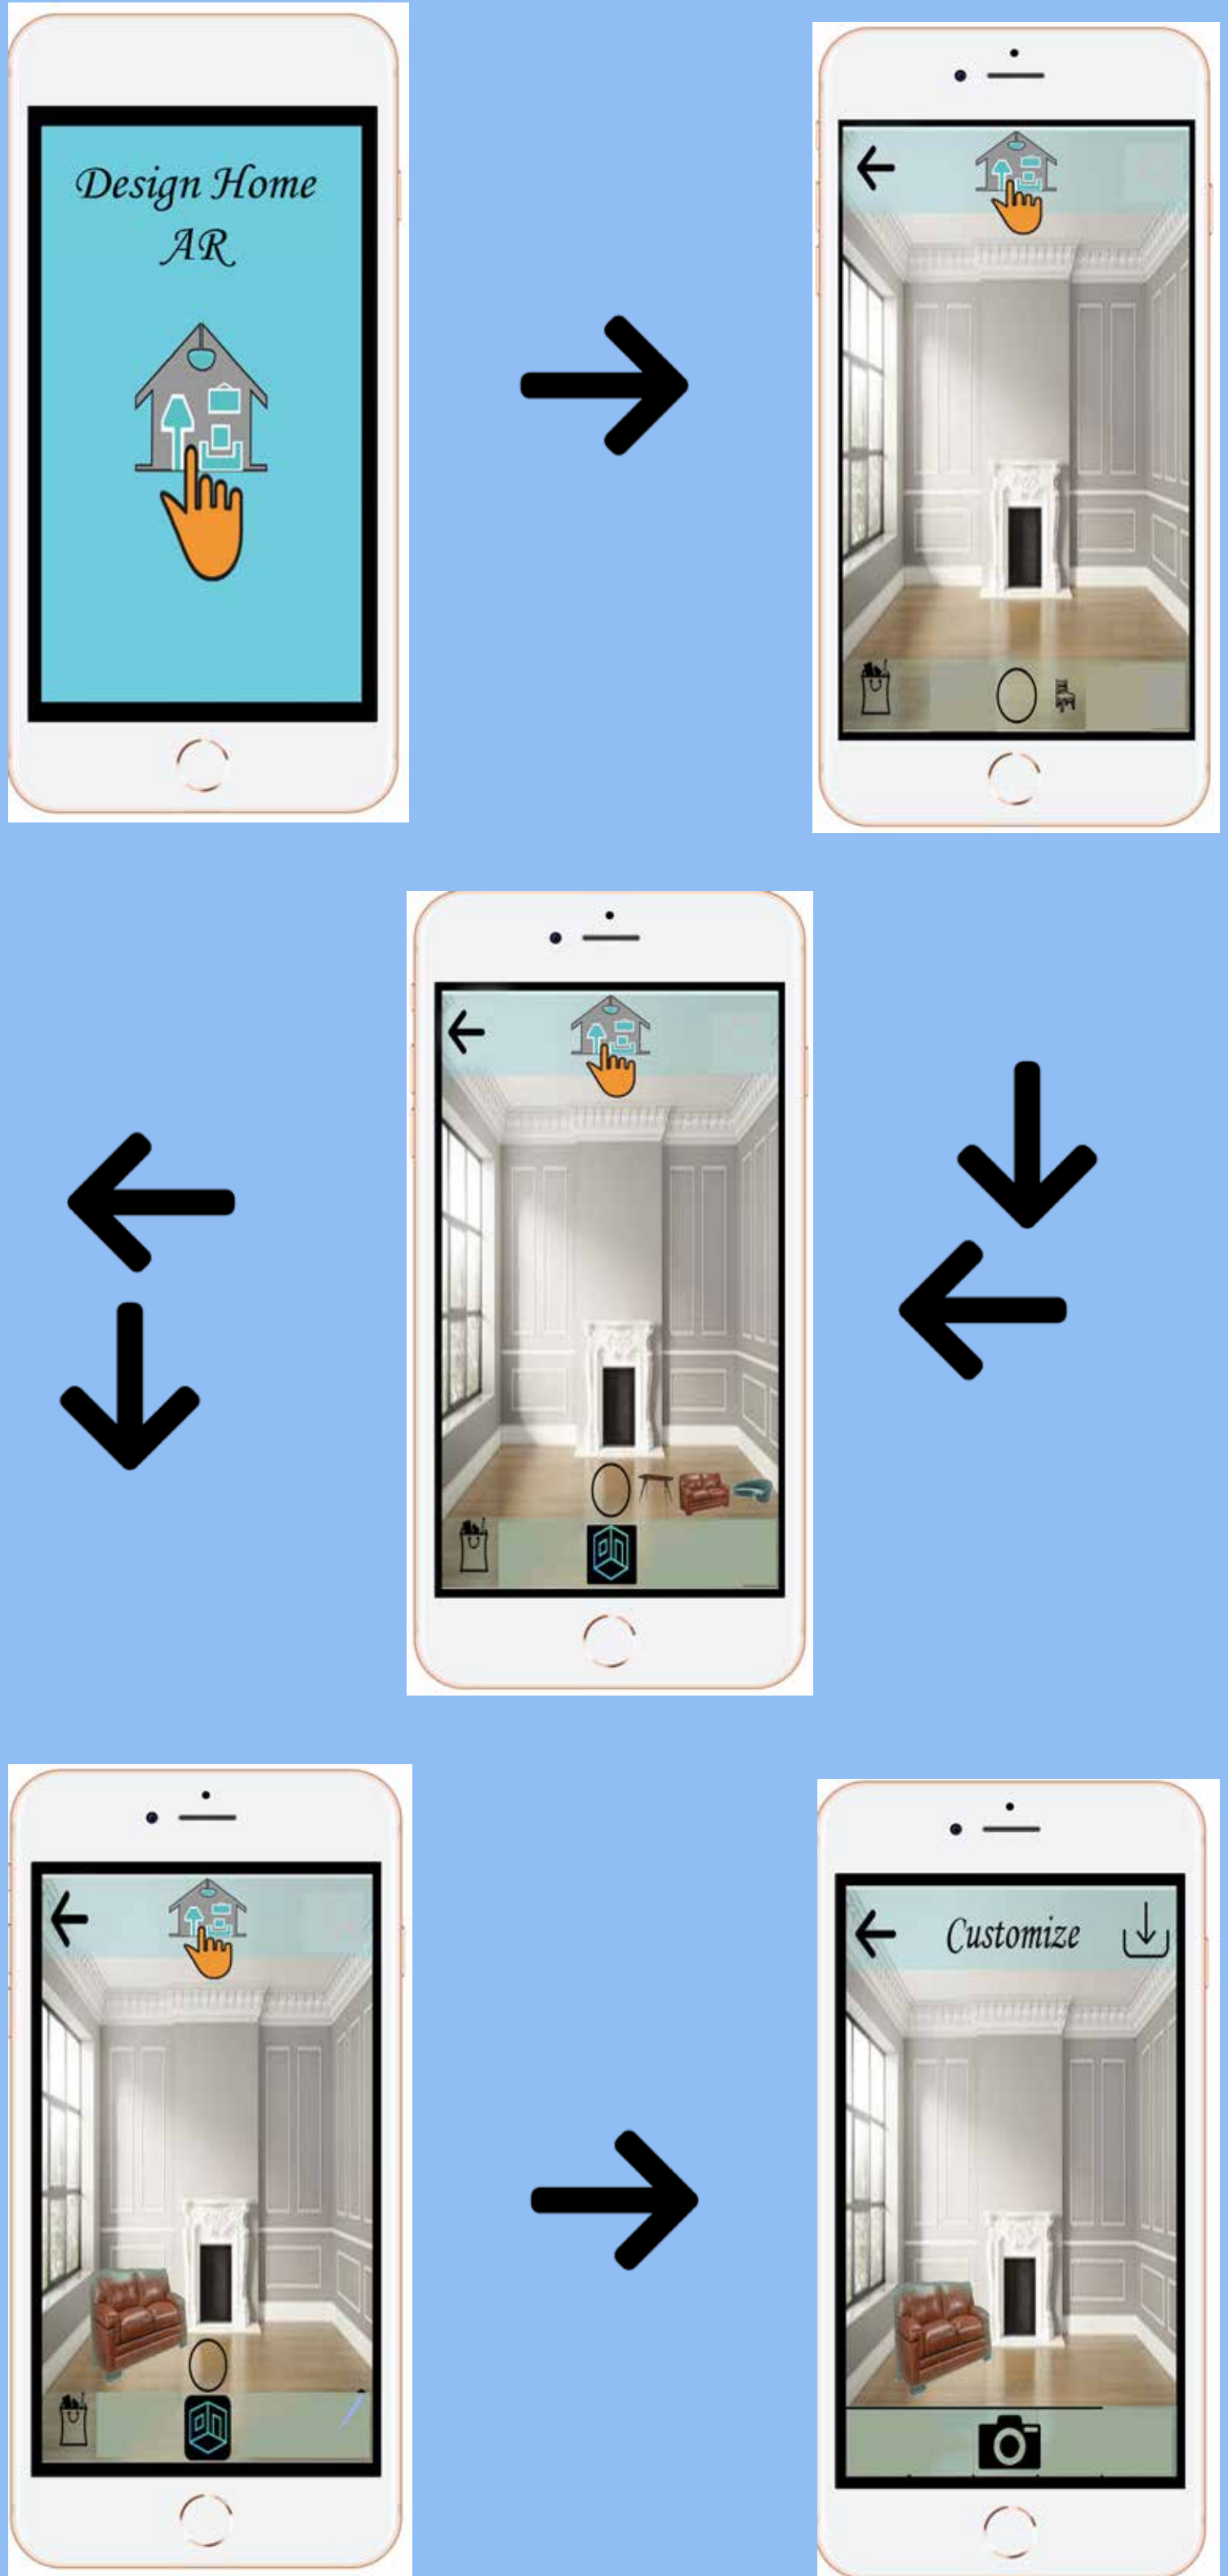

## ABOUT

Home Design is an Augmented Reality app where a user can try putting different furniture at their home. It has been made in Unity software, and the UI design has been made in AdobeXD. I added the Vuforia engine with Unity to bring the augmented reality in the app.

The main screen of the app shows how the app works. The user can follow the steps in order to use the app and can save the picture with an overlay of the filter.
